National
 Micro
 Media Ltd

Ireland's Leading Web Archiving,
 Digital and Microfilming Specialists

1700's to Present Day

About Us

National Micro Media Ltd. is the country's longest established document management company. For over 40 years we have been responsible for the preservation and archive management of many of the nation's leading national, regional and out-of-date titles and other documents of historical interest. We have kept ourselves to the fore through our innovative approach and investment in technology. We offer the full range of microfilming and digitisation services right from digital imaging to archive website development.

PRODUCTS & SERVICES

PRESERVATION OF NEWSPAPER TITLES THROUGH MICROFILMING

Newspapers are amongst the most valuable resources available in libraries of all sizes. They provide invaluable reference material for those with an interest in Irish studies and genealogical research. Despite recent developments in digitisation technology, microfilm is still recognised as the international benchmark method of ensuring their long-term preservation as film has a life span of 500 years!

HYBRID SOLUTION: DIGITISATION OF FILM & SCANNING HARDCOPY

At NML we have the country's most advanced digitisation equipment available to ensure we capture the best possible image from your microfilm archives. We also offer full colour scanning of hardcopy material. These scanners have been designed with advanced cradle systems to ensure there is no damage to older material during this process. We offer excellent incentives for dual microfilm and digitisation processes.

O.C.R PROCESSING

Once your material has been digitised whether from microfilm or the original hardcopy we can render it fully word searchable using our up-to-the minute OCR technology. Your content is indexed and word searchable with each page captured to the highest standard. The viewing software will run on any PC through external hard drives or CD-Rom/DVD. We can also develop and host purpose built websites to display your content.

MICROFILM ARCHIVE AND DUPLICATION

At NML we have the country's largest microfilm archive of newspapers. All these titles are available on high quality positive microfilm or on word searchable DVD/CD. We are responsible for the archive management of many of the nation's leading national and regional titles and out-of-print titles.

Digital Preservation & Website Development

At NML we are proud to announce our latest innovation. We can now offer all libraries in Ireland the opportunity to digitise their holdings, either from hardcopy or microfilm and display this content on purpose built and fully managed websites. This will unlock your libraries valuable content, preserve the integrity of your original holdings and deliver access to all your members, in a future proof XML based digital format. Access can be controlled, to restrict access in-house right up to complete open internet access.

We use the world leading "Zylab" digital application to ensure best possible recognition of all your text. ZylAB gathers together the most sophisticated OCR engines so that we can achieve the best possible OCR results. Currently ZylImage offers seven different OCR engines, which work in tandem. These OCR engines support features such as recognition of over 200 languages, voting algorithms, multiple direction recognition, auto-orientation, full colour support and much more.

We offer a full range of packages and are very flexible in our approach to ensure we can bring such projects, which were formally the preserve of larger institutions, into the remit of the smaller libraries. This technology is in the use within the library of Congress, The National Library of the Netherlands and many leading libraries and institutions around the Globe.

SOME OF OUR TITLES

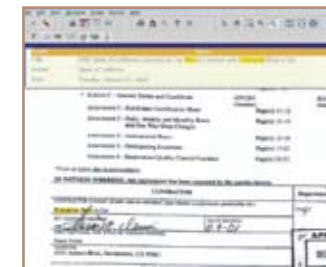

- Irish Independent
- The Corkman
- UlsterHerald
- Drogheda Independent
- The Kerryman
- Sunday Independent
- The Herald
- The Anglo-Welt
- The Sligo Champion
- Comhaltas Telegraph
- The Meath Chronicle
- and many more

OCR

National Micro Media is the only company in Ireland able to provide hybrid solutions. We can scan and convert hard copy material and microfilmed records to digital, and OCR these documents rendering them fully word searchable. Furthermore we can produce high quality microfilm directly from these digitised images at a fraction of the cost.

THE MOST ADVANCED OCR IN THE WORLD BROADENS YOUR INFORMATION MANAGEMENT CAPABILITIES

If a web based solution is not for your library or institution, we can digitise your microfilm and hardcopy and render them fully word searchable on self loading DVD's or hard drives which will operate on all PC's. This will offer the same functionality as the purpose built web application at a greatly reduced cost.

Word Searched Highlighted
